STN LCD

**PRELIMINARY
SPECIFICATION**

The information given in this document is carefully checked and believed to be reliable. Data Display reserves the right to make changes in product or specification at any time and without further notice. Data Display products are not intended for use in systems in which failures of product could result in personal injury. All mentioned trademarks are registered trademarks of their owner.

1. SCOPE

This specification defines general provisions as well as inspection standards for LCD module of Graphic type supplied by Data Display AG.

If the event of unforeseen problem or unspecified items may occur, naturally shall negotiate and agree to solution.

2. WARRANTY

Basically, Warranty term is 6 Months after delivery date, Data Display could compensate for defectives which happen within warranty term on the condition that the products stored or used as specified under normal condition within the contents of specification.

Otherwise, it is impossible to compensate for defects in the case defects take place by customer's mistake such as miss-handling or circuit change.

After 6 Months of warranty term, all compensation for defects is with charge.

3. FEATURES

Display Mode:	Transmissive and negative type Black and white mode FSTN LCD
Display Color:	Display dots: White Background: Black
Display format:	320 (w) x 240 (h) full dots
Input Data Display:	4-bits parallel data input from a LCD controller
Multiplexing ratio:	1/240 duty
Viewing direction	6 o'clock
Backlight:	CCFL (Cold cathode flurescent lamp)
Features:	TAB (Tape Automated Bonding) Method One connector solution

4. MECHANICAL SPECIFICATION

Item	Specifications	Unit
Dimensional outline	157.5 (W) x 121.6 (H) x 12.7 max. (t)	mm
Number of dots	320 (W) x 240 (H) dots	-
Number of characters	40C x 30L (1200) in case of 8 x 8 fonts	-
Viewing area	121.0 (W) x 91.6 (H)	mm
Active area	115.17 (W) x 86.37 (H)	mm
Dots pitch	0.36 (W) x 0.36 (H)	mm
Dots size	0.33 (W) x 0.33 (H)	mm
Weight	Typ. 185	g

5. MAXIMUM RATING

 $V_{SS} = 0V$

Item	Symbol	Min.	Max.	Unit	Note
Supply voltage	Logic	Vdd	0	6.0	V
	LCD drive	Vss - Vee	8	30	V
Input voltage	Vi	0	Vdd	V	
Normal operating temperature	Tnop	0	50	°C	
Extended operating temperature	Top	- 15	65	°C	1
Storage temperature	Tstg	- 25	75	°C	
Humidity	-	-	90	%RH	2

Note 1: Temperature range with reduced optical parameters.

Note 2: Wet bulb temperature should be 29°C max. and no condensation of water.

6. ELECTRICAL CHARACTERISTICS

6.1 Electrical Characteristics

Item		Symbol	Condition	Min.	Typ.	Max.	Unit
Supply voltage	Logic	Vdd	-	4.75	5.0	5.25	V
	LCD drive	Vss - Vee		17.0	-	25.0

8.6 Voltage supply and operational precaution

Follow the power on/off sequence shown in Fig. 8-3 to prevent latch-up or DC operation of the LCD panel.

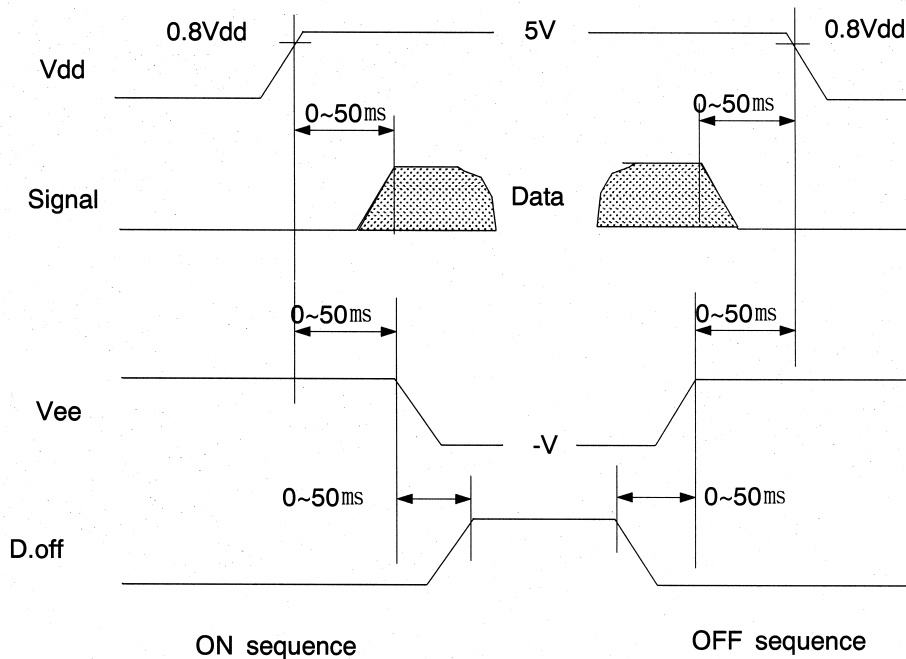

Fig8-3. Power ON/OFF sequence

9. UNIT DRIVING METHOD

9.1 Circuit configuration

Fig. 8-1 shows the block diagram of the unit circuitry.

9.2 Input data and control signal

The LCD driver is 80bits LSI, consisting of shift registers, latch circuits and LCD driver circuits.

Display data, which are externally divided into data for each row (320 dots) will be sequentially transferred in the form of 4-bits parallel data through shift registers by clock signal CL2 from the left top of the display face.

When data of one row (320 dots) have been input, they will be latched in the form of parallel data for 320 lines of signal electrodes by latch signal CL1.

Then the corresponding drive signal will be transmitted to the 320 lines of column electrodes of the LCD panel by the LCD drive circuits.

At this time, scan start-up signal FLM has been transferred from the scan signal driver to the 1st row of scan electrodes, and the contents of the data signals are displayed on the 1st rows of the display face according to the combinations of voltages applied to the scan and signal electrodes of the LCD.

While the 1st rows of data are being displayed, the 2nd rows of data are entered. When 320 dots of data have been transferred, then latched on the falling edge of CL1 clock.

The display face proceeds to the 2nd rows of display.

Such data input will be repeated up to 240th row of each display segment, from upper to lower rows. To complete one frame of display by time sharing method.

Then data input proceeds to next display face. Scan start-up signal FLM generates scan signal to drive horizontal electrodes.

The unit shall be driven at the speed 70-80Hz/frame to avoid flickering.

Since DC voltage, if applied to LCD panel, causes chemical reaction which will deteriorate LCD, drive waveform shall be inverted at every display frame to prevent the generation of such DC voltage.

Control signal M plays such role.

Because of the characteristics of the CMOS driver LSI. the power consumption of the unit goes up as operating frequency CL2 increases.

10. QUALITY LEVEL

10.1 Inspection conditions

10.1.1 The environmental conditions for inspection shall be as follows.

Room temperature:	20 ± 3 °C
Humidity:	65 ± 20 % RH

10.1.2 The external visual inspection

The inspection shall be performed by using a single 20 W fluorescent lamp for illumination and the distance from LCD eyes of the inspector should be 30 cm or more.

10.1.3 Light method (1)

Fluorescent lamp set the perpendicular to the display surface.

Inspection distance and angle (2)

Inspection should be performed within \emptyset (\emptyset is usually 30°) from Z axis to each X and Y axis.

Inspection distance of any direction within \emptyset must be kept 30 ± 5 cm to the display surface.

10.2 Sampling procedures for each item's acceptance level table.

Defect type	Sampling procedures	AQL
Major defect	MIL-STD-105D Inspection level I normal inspection single sample inspection	0.65
Minor defect	MIL-STD-105D Inspection Level I normal inspection single sample inspection	1.5

10.3 Classification of defects

10.3.1 Major defect

A major defect refers to a defect which is not considered to substantially degrade usability for product applications.

10.3.2 Minor defect

A minor defect refers to a defect which is not considered to substantially degrade product application or a defect, which deviates from existing standards almost unrelated to the effective use of the product or its operation.

10.4 Inspection standards

10.4.1 Criterion for black/white spot or line

Item	Criterion for defects
Black/White spots (I) Black/White lines (I)	Spots or lines appear dark or white in display patterns and remain unvaried in terms of size and shade regardless of the LCD operating voltage.
Black/White spots (II) Black/White lines (II)	Spots or lines appear dark or white in display patterns and vary in terms of size and shade with the LCD operating voltage.

Note: All of electrical defect must be judged on the state of optimum voltage that having a best contrast.

10.4.2 Inspection standards

Item	Criterion for defects			Defect type
1) Non display	No non display allowed			Major
2) Irregular operating	No irregular operatings allowed			Major
3) Short	No shorts allowed			Major
4) Open	Any segments or common patterns that don't activate are rejectable			Major
5) Black/White spot (I)	Size Ø (mm)		Acceptable number	Minor
	Ø < 0.15		Ignore (note)	
	0.15 < Ø < 0.25		4	
	0.25 < Ø < 0.30		2	
	0.30 < Ø		0	
6) Black/White line (I)	Length (mm)	Width (mm)	Acceptable number	Minor
	10 < L	0.03 < W < 0.04	5	
	5.0 < L < 10	0.04 < W < 0.06	3	
	1.0 < L < 5.0	0.06 < W < 0.07	2	
	L < 1.0	0.07 < W < 0.09	1	
Note: Defects separate at interval if 30 mm each other				
7) Black/White spot (II)	Size Ø (mm)		Acceptable number	Minor
	Ø < 0.30		Ignore (note)	
	0.30 < Ø < 0.50		5	
	0.50 < Ø < 1.00		3	
	1.00 < Ø		0	
8) Black/White line (II)	Length (mm)	Width (mm)	Acceptable number	Minor
	20 < L	0.05 < W < 0.07	5	
	10 < L < 20	0.07 < W < 0.09	3	
	5.0 < L < 10	0.09 < W < 0.10	2	
	L < 5.0	0.10 < W < 0.15	1	
Note: Defects separate at interval if 30 mm each other				
9) Back Light	1) No Lighting is rejectable 2) Flickering and abnormal lighting are rejectable Note: In case of the module with back light (E/L or LED or CCFT)			Major

$0.80 < \varnothing$	0																
14) Stains on LCD panel surface	Stains which cannot be removed even when wiped lightly with a soft cloth or similar cleaning too are rejectable	Minor															
15) Rust in Bezel	Rust which is visible in the bezel is rejectable	Minor															
16) Defect of land surface contact (poor soldering)	Evident crevices which is visible are rejectable	Minor															
17) Parts mounting	(1) Failure to mount parts (2) Parts not in the specifications are mounted (3) Polarity, for example, is reversed	Major															
18) Parts alignment	(1) LSI , IC lead is more then 50% beyond pad outline. (2) Chip component is off center and more then 50% of the leads is off th pad outline.	Minor															
19) Conductive foreign matter (Solder ball, Solder chips)	(1) $0.45 < \varnothing, N \geq 1$ (2) $0.30 < \varnothing 0.45, N \geq 1$ \varnothing : Average diameter of solder ball (unit: mm) (3) $0.50 < L, N \geq 1$ L: Average length of solder chip (unit: mm)	Major Minor Minor															
20) Faulty PWB correction	(1) Due to PWD copper foil pattern burnout, the pattern is connected, using a jumper wire for repair; 2 or more places are corrected per PWB. (2) Short circuited part is cut, and no resist coating has been performed.	Minor															

11. RELIABILITY

11.1 Items of reliability

All test results of items should be judged after 1 hours recovery time at room temperature.

Item	Condition	Criterion
1) High temperature operating	50 °C, 96 hrs	<ul style="list-style-type: none"> • After testing, cosmetic defects should not happen
2) Low temperature operating	0 °C, 96 hrs	
3) Humidity	40 °C, 90% RH, 96 hrs	<ul style="list-style-type: none"> • Contrast ratio should not happen lower then 10% of initial value
4) High temperature storage	60 °C, 120 hrs	
5) Low temperature storage	-20 °C, 120 hrs	
6) Thermal shock storage	25 °C 5(min) -20 °C 30(min) 25 °C 5(min) 60 °C 30(min) 5 cycle	<ul style="list-style-type: none"> • Total current consumption should be below double of initial value
7) Vibration	10 ~ 55 ~ 10hz amplitude: 1.5 mm 2 hrs for each direction (X,Y,Z)	
8) Static Electricity	150pF 330Ω ±8kV 10 times air discharge	<ul style="list-style-type: none"> • After testing, cosmetic and electrical defects should not happen • Total current consumption should be below double of initial value

Note: In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part.

12. HANDELING PERCAUTIONS

12.1 Mounting method

The LCD panel of Data Display LCD module consists of two this glass plates with polarizes which easily get damaged.

12.2 Caution of LCD handling and cleaning

When cleaning the display surface, use soft cloth with solvent [recommended below] and wipe lightly

- Isopropyl alcohol
- Ethyl alcohol
- Trichlorotrifloroethane

Do not wipe the display surface with dry or hard materials that wil damage the ITO patterns. Do not use following solvent on the pad or prevent it from being contaminated:

- HCFC
- Soldering flux
- Chlorine (Cl), Salfur(S)
- Spittle, Fingerprint

If goods were sent without being silicon coated on the pad, ITO patterns could be damaged due to the corrosion as time goes on.

Data Display would like to propose that the Customer conduct the silicon coating unless the goods supplied without Silicon coating.

12.3 Caution against static charge

The LCD module use C-MOS LSI drivers, so we recommended that you, connect any unused input terminal to Vdd or Vss, do not input any signals before power is turned on, and ground your body, work/assembly areas, assembly equipment to protect against static electicity.

12.4 Packing

- Module employ LCD elements, and must be treated as such.
Avoid intense shock and falls from a height.
- To prevent modules from degradiation, do not operate or store them exposed direct to sunshine or higher temperature/humidity.

12.5 Caution for operation

- It is an indispensable condition to drive LCD's within the specified voltage limit since the higher voltage than the limit causes the shorter LCD life.
An electrochemical reaction due to direct current drive should be avoided.
- Response time will be extremely delayed at lower temperature than the operating temperature range and on the other hand at higher temperature LCD's show dark in them.
However those phenomena do not mean malfunction or out of order with LCD's, which will come back in the specified operating temperature.
- If the display area is pushed hard during operation, some font will be abnormally displayed but it resumes normal condition after turning off once.
- A slight dew depositing on terminals is a cause for electro-chemical reaction resulting in terminal open circuit.
Usage under the relative condition of 40°C, 50% RH or less is required.

12.6 Storage

In the case of storing for a long period of time [for instance, for years] for the purpose or replacement use, the following ways are recommended.

- Storage in a polyethylene bag with the opening sealed so as not to enter fresh air outside in it and with no desiccant.
- Placing in a dark place where neither exposure to direct sunlight nor light is, keeping the storage temperature.
- Storing with no touch on polarizer surface by anything else.
[It's recommended to store them as they have been contained in the inner container at the time of delivery from us.]

12.7 Safety

- It is recommended to crush damaged or unnecessary LCD's into pieces and wash off liquid crystal by either of solvents such as acetone and ethanol, which should be burned up later.
- When any liquid leaked out of a damaged glass cell comes in contact with your hands, please wash it off well with soap and water.

13. PRECAUTION FOR USE

A limit sample should be provided by the both parties on an occasion when the both parties agreed its necessity.

Judgement by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.

On the following occasions, the handling of problem should be decided through discussion and agreement between responsible of both parties.

- When a question is arisen in this specification.
- When a new problem is arisen which os not specified in this specifications.
- When an inspection specifications change or operating condition change in customer is reported to Data Display, and some problem is arisen in this specification due to the change
- When a new problem is arisen at the customer's operating set for sample evaluation in the customer site.

14. DIMENSIONAL OUT LINE

Refere to the attached drawing.
